Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Perlov (US 6,283,692) in view of Mages (US 2002/0090284). Perlov teaches a substrate processing unit 10 in column 2, lines 57-61, a substrate transfer unit 24 in column 2, line 67 and column 3, lines 1-6, a mounting part 58 in column 3, lines 49-53, a first and second shelf lines in column 4, lines 16-23, and a transport element 76 in column 4, lines 32-39. Perlov does not teach the displacement element vertically moving one shelf of the plurality of shelves. Mages teaches the displacement element and (generally 5) of said plurality of shelves and second shelf line. Therefore it would have been obvious to a person of ordinary skill in the art at the time the invention was made have modified Perlov (which would include the overall controls) by the general teaching of Mages to add a displacing element to allow displacement of a plurality of shelves to allow grater access and versatility.

2. Regarding claims 4,5, Perlov teaches the ability of having different amount of shelves as well as shelf lines in column 4, lines 16-23. Perlov as modified already by Mages teaches the displacement performed by the displacing element capable of being within a "height" of the first shelf line in the vertical direction and also the amount of

Art Unit: 3652

displacement of the second shelves "corresponding to" said second predetermined interval. Therefore it would have been obvious to a person of ordinary skill in the art at the time of the invention to modify Perlov to have any number or combination of numbers of shelves to increase versatility.

Conclusion

Applicant's arguments filed 10/1/07 have been fully considered but they are not persuasive.

Applicant argued that Perlov and the other references do not teach the claimed controller. However, Perlov as modified by Mages includes modification of Perlov's controller and the result teaches the currently broadly claimed limitations.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 3652

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
